When no moves can be made to protect the king, it is in 'checkmate' and the game is over. Alternatively, a draw may be declared when both players feel a final checkmate is unlikely.

Winning the game

QUEEN – Can move any number of squares horizontally, vertically or diagonally. It cannot jump over other pieces.

KNIGHTS – Move in an 'L' shape and then one square left or right. They are the only pieces with the ability to jump over others.

KING – Can move one square in any direction. Casting is a move in the game of chess involving a player's king and either of the player's original rooks. It is the only move in chess in which a player moves two pieces in the same move, and it is the only move in which a player moves where a piece can be said to "jump over" another. Casting consists of moving the king two squares towards a rook on the player's first rank, then moving the rook to the square over which the king crossed. Casting may only be done if the king has never moved, the rook involved has never moved, the squares between the king and the rook involved are unoccupied, the king is not in check, and the king does not cross over or end on a square in which it would be in check.

BISHOPS – Can move any number of squares diagonally. They cannot jump over other pieces.

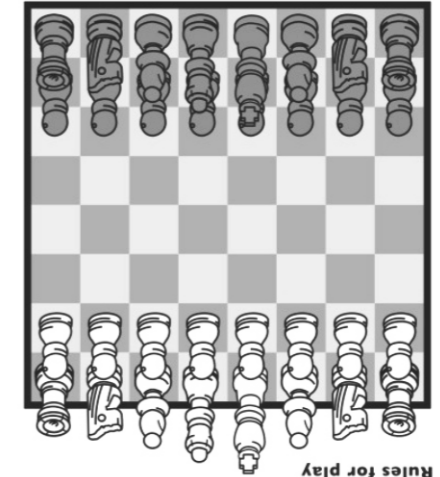

ROOKS – Can move any number of squares horizontally or vertically. They cannot jump over other pieces.

PAWNS – Can only move one square forward per turn, except their first when they can move two. They are the only pieces which capture differently from how they move. They can capture other pieces diagonally to their front, left and right.

The object of chess is to place your opponent's king piece in 'check'. This is when the piece is in direct threat of being taken by the opponent. Check can be interrupted by blocking the attack with another piece, or by moving the king piece to safety. If a player advances a pawn all the way across the board, the pawn is then promoted to a queen, rook, knight or bishop. The choice is not restricted to previously captured pieces. It is therefore possible to have multiple queens and/or numerous rooks, knights or bishops in play.

Chessboard starting layout

Rules for play

Although some historians are convinced that Chess came from China, most of them believe the earliest predecessor of the game originated in India, around the 7th century AD. The rules of a game called Shatranj were modified in southern Europe between 1200 and 1475, turning it into the game of Chess we know today.
